RELEASE NOTES ALLIANDER SPECIFIC CHANGES

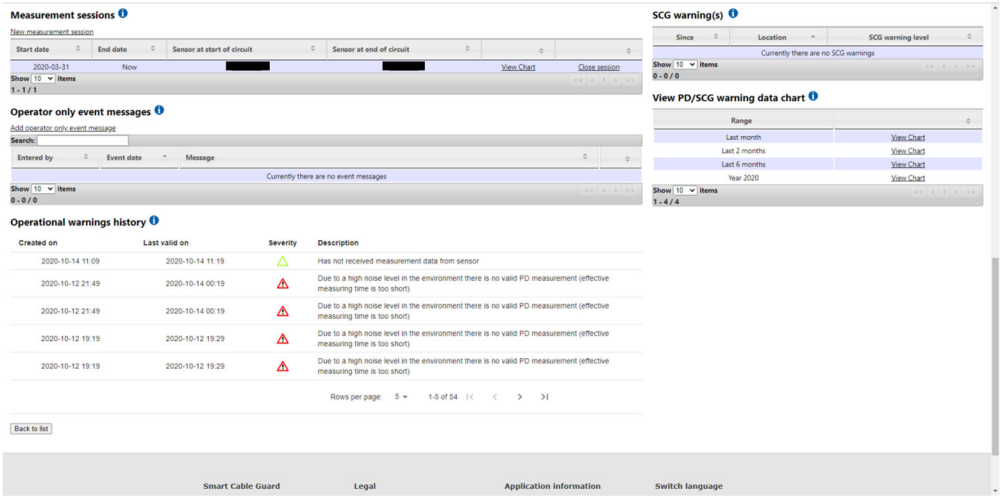
Release EMEA 2020-10-29 (PLANNED)

These are preliminary release notes containing the planned changes. Scope of the release may change before or during the actual release. After the release final release notes will be distributed.

New/changed features

Change request: [DNV GL-5] [CHG-015] Add history on operational warnings

- Operational warnings that are not valid are moved to a new data store.
- After this, the original warning is deleted.
  This deletion is the existing procedure to minimize the number of circuits that need operational attention.
- In the CWI, the circuit details page is extended with an overview of warnings that where detected on this circuit in the past:
  - Only relevant operational warnings are presented
  - The history of operational warnings is created from the moment this feature is deployed and enabled. Warnings deleted before that moment are not recovered and will not be available in the overview.



- In addition to the original Change Request, some extra information is provided in the description of historic warnings, like measured propagation time.
