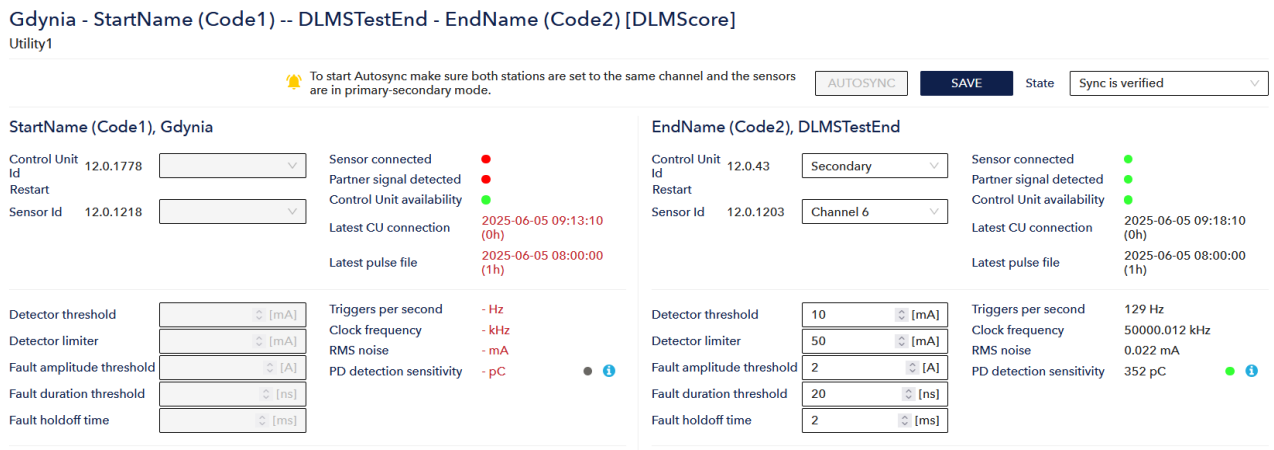
SCG PLATFORM RELEASE NOTES

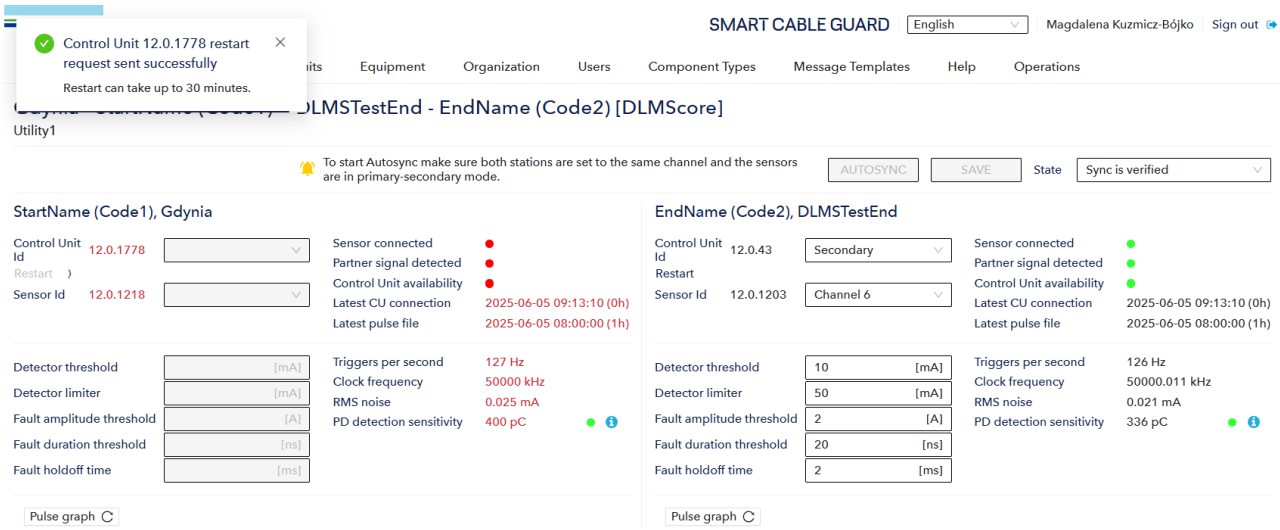
Release r136

New features and changed features

- 642243 [SCG Portal] On the Sync Page the error handling is improved



- 642259 [SCG Portal] The Sync Page provides more feedback during Control Unit restart



- 494037 The Region's settings are now used in the download functionality
- 628906 The Circuit Station Code field is changed from 50 to 100 characters
- 630291 We have released version 4 of the Data Export API, which updates the terminology from "master-slave" to "primary-secondary.". In accordance with our API versioning policies, previous version (v3) remains available and will be removed in the next release.
