# SCG PLATFORM RELEASE NOTES

Release r137

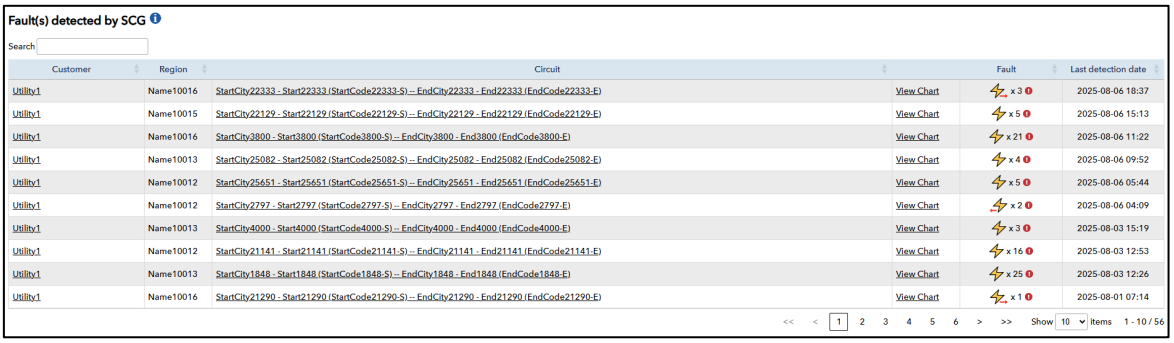
## New features and changed features

- 642279 Extreme PD Values on the SCG Portal chart was not working well

  We have optimized the handling of extreme values, resulting in a slight improvement in chart responsiveness.

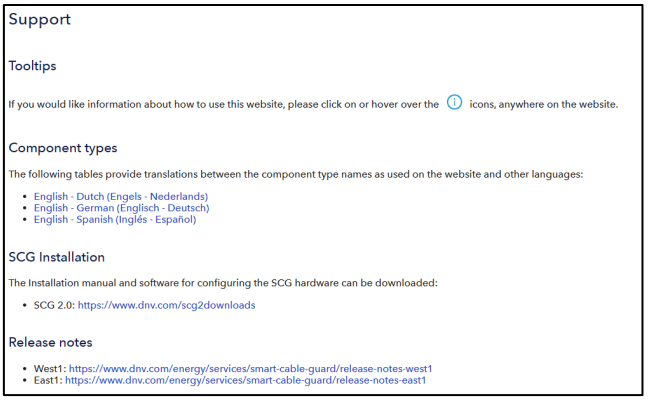
- 677181 Restyle data grids on SCG Portal

  All data grids on the SCG Portal have now the same modern style.



- 685593 Release notes on Help page

  To support both tracking ongoing platform changes and referencing historical updates, release notes can now be accessed directly from the Help page.



## Bugs

- 474371 Bad performances connected with clusters data

  After evaluating the performance of the cluster data, we refined the algorithm to enhance its efficiency.

- 659060 Deactivation of a circuit is not always working properly

  It was observed that deactivating a circuit or ending a measurement session does not consistently terminate all related backend processes.

- 663418 Circuit without SCG hardware connected is visible on Circuits list

  Following an earlier bug, we identified that deactivated circuits—specifically those without SCG hardware—continued to appear in the circuit list.

- Various security related issues
- Various efficiency improvements
