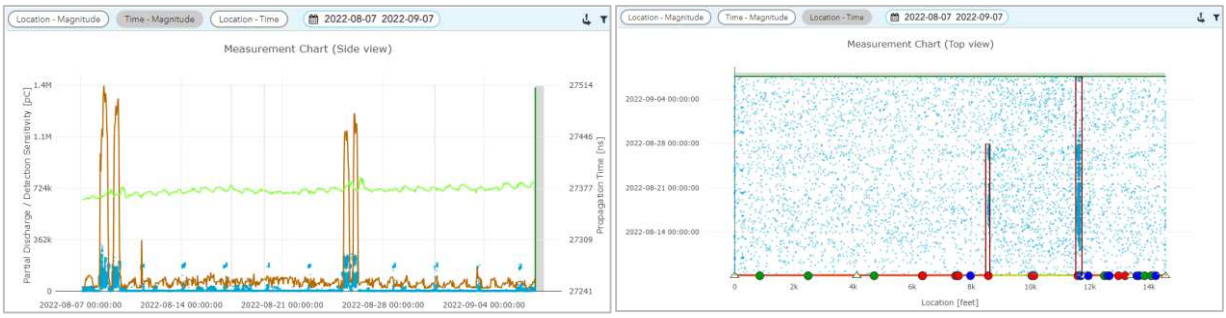
SCG PLATFORM RELEASE NOTES

Release r127

New features

- **New charts (beta)** – Our completely new charts are now available to all users as beta version. While we continue to refine and add to these new charts the current charting functionality remains available. The new charts contain a lot of improvements over the current charting functionality:
    - New, modern user interface
    - Faster and more responsive
    - Zooming and panning functionality also available for charts with lots of data points
    - Plotting more types of data in the same chart, making it easier to correlate different types of data
    - Plotting of clusters, concentrations of activity identified by the SCG artificial intelligence
    - Isolate data from a particular location or cluster to allow better analysis of that location



Changed features

- Previous, deprecated versions of parts of the SCG API are decommissioned. With release r124 in March 2022 newer versions became available of the SCG APIs Inhousing v1, Inhousing v2 and DataExport v1. With the release of the newer versions these older versions were deprecated. These deprecated versions are now decommissioned.

Fixes

- 361977 – Footer was missing on SCG landing page https://scg.dnv.com/
- 361977 – Replaced header in monthly SCG summary email with DNV header
